Summary

Junior Front-End Developer with strong foundational skills in HTML, CSS, and JavaScript. Experienced in building responsive, user-friendly websites and eager to apply technical expertise to real-world projects.

Skills

HTML, CSS, JavaScript, React, Typescript, Git, Bootstrap

Details

Proficient in HTML, CSS to create clean, user-friendly websites with responsive design.

Skilled in JavaScript and TypeScript for dynamic interactions and writing clean code.

Experienced with React for scalable UI development.

Proficient in Git for team collaboration. Capable of handling **all requested tasks** and solving problems using modern technologies like ChatGPT.

Experienced in completing **small and large projects**.

passionate about continuous learning to improve work quality and enhance company products.

Projects

- **PickoTake Website**: Developed a fully responsive online food ordering website with an appealing user interface and a seamless user experience, allowing customers to easily browse and place orders.
-
- **Restaurant Menu with Customizable Filters**: Created an online menu that allows users to filter items by categories, price, ingredients, and other customizable options. This project highlights my ability to implement efficient user interactions and use JavaScript to develop dynamic features.
-
- **Various Small and Large Projects**: Includes projects such as building interactive forms, animated image galleries, and responsive landing pages. These projects have strengthened my front-end development and design skills.
